what shipped

announcer beta ? live

Pick today's MLB game. We poll every 7 seconds, speak updates with neural/Kokoro voices (Lewis by default), and keep a call log. Try normal vs booth mode.

game-only MARII (no cloud AI)

Announcer Ask is a contained MARII: lineup, pitcher/batter, situation, bullpen, hot bats. Off-topic questions get a honest beta shrug ? we're still climbing leagues.

algorithmic projections

Projections blend each club's recent finals (~28 days), head-to-head, and live inning/score to estimate a final. Booth color from math + the board ? not an LLM.

pyx assistant stays local-first

Jokes, math, sports, weather from the local notebook and live feeds. MARII cloud LLM boost is retired.

still live / coming

MI moderator API for chat/game text. MCI still on the roadmap.
